Project Management professional (PMP) Preparation Course

6th Edition

Course outline

Course Overview

Every organization works to success, to achieve its' goals, to run smoothly and to develop products and services, regardless the mission internal/external development, the mission is mapped to targets which are the core element for organization grow and success. Project management is critical to success for all organizations profitable and non-profitable, it is how to achieve goals in the best practice with best resources management, how to integrate all communications, all staff and all other parts in one cohesive environment. Researches indicates that 74% of all projects hit roadblocks, are over budget or are late, and 28% of these projects fail altogether.

With success project management we can run our projects with minimum cost, with high quality and shortest schedule, in this course we will learn how to balance between these three pillars, how to manage different stakeholders and how to report effectively, we will learn how to manage all parts and knowledge areas of a project.

This is a comprehensive course in project management discipline, attendees will gain advanced skills for project management (theory & practice), and it is a formal PMP training course that enables attendees to sit for the PMP exam.
